PersDashboard Plugin

1. Introduction

PersDashboard ILIAS Plugin is an User Interface Plugin which allows the insertion of personal text in Dashboard.

2. Supported ILIAS Versions

The Plugin supports ILIAS Versions 5.4.x. and 7.x.x

3. Feature Overview

Add text for the Dashboard with the option of usage of followed data:

i.   Login name ([LOGIN_NAME])

ii.   Firstname ([FIRST_NAME])

iii.   Lastname ([LAST_NAME])

iv.   Date of account's creation ([CREATE_DATE])

v.   Date of first login ([FIRST_LOGIN])

vi.   Count of courses ([COUNT_COURSES])

vii.   Count of courses that start today ([COUNT_START_COURSES_TODAY])

viii.   Picture profile picture url ([PICTURE_PROFILE_URL])

ix.   Title and link of last visited object ([LAST_VISITED_TITLE], [LAST_VISITED_LINK])

There are two if-conditions too. The [IF_FIRSTLOGIN] check if the user login fort he first time and the [IF_BIRTHDAY] check if today is the birthday of the user.

4. Installation / Activation

i.   After downloading the Plugin as ZIP from Github, rename the extracted directory to PersDashboard and transfer it to Customizing/global/plugins/Services/UIComponent/UserInterfaceHook
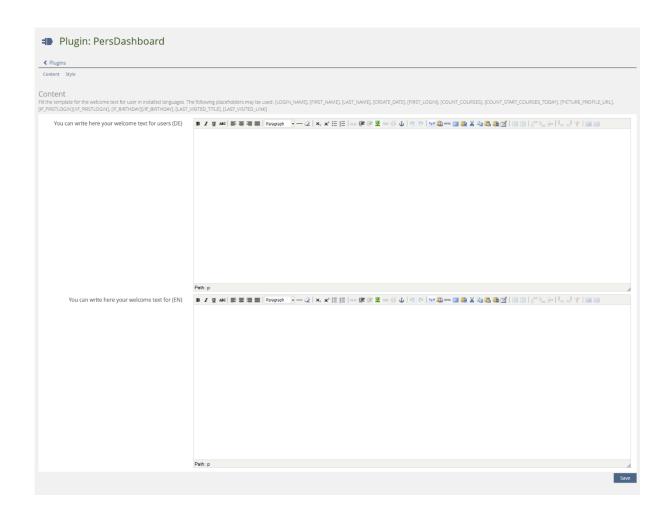

ii. Log in to the ILIAS installation as Administrator and go to Administration > Extending ILIAS > Plugins

iii. In the list of plugins find the PersDashboard plugin and choose Install in Actions

iv. After installation choose Activate in Actions

The plugin has been installed and activated and is ready for use.

5. Configuration

Admin can define in Content in Configuration the template of the content that will be displayed in dashboard. If more than one language is activated then will be displayed a field per language in configuration

Admin can define the style oft he template in Style in Configuration too.

After filling the template and the css, the content will be displayed at the bottom of dashboard's content such the followed example:
